# SUBJECT INDEX VOLUME 31 2001

acetyl-CoA synthase, 403
ACS, 403
adenosine 5′-monophosphate, 343
amine catalysis, 71
amino acids, 15, 199, 257, 481, 501
amino acid catalysis, 71
aminoacyl-tRNA synthetases, 257
aqueous Fischer-Tropsch-type synthesis, 103
Archean atmosphere, 271
Archean ecosystems, 271
astrobiology, 185
asymmetric synthesis, 199
Atacama Desert, 287
atmospheric methane, 271
autocatalysis, 71

bacterial spores, 527
basaltic volcanism, 311
base content, 257
biomonomers adsorption onto minerals, 343

carbon monoxide, 481
carbon monoxide dehydrogenase, 403
catalysis, 231, 381
chemical evolution, 87, 343, 459
chirality, 167, 199, 501
chromium, 311
circularly polarized light, 167, 249
Class I and II, 257
comets, 15
compositional information, 119
conidia, 287
continental crust, 3
COSAC, 199
crystallization, 501
cyanide, 53
cyanoacetaldehyde, 221
cyanoacetaldehyde dimer, 221
cyanogen, 157, 481
cyclodextrin, 199
cytosine, 221

DAMN, 53
*Deinococcus radiodurans*, 287
derivatization, 199
DNA lesions, 287
dormant life, 287
dry-down conditions, 221

enantiomers, 249, 501
enantiomer separation, 199
enantiospecificity, 241
evaporation, 221
Europe, 459
exoplanets, 459
extraterrestrial UV radiation, 527
extreme dryness, 287
extremophiles, 459

flow reactor, 231
formaldehyde, 87
formose reaction, 71, 87

GARD, 119
gas chromatography, 199
genome composition, 257
glyceraldehyde, 231
glycolaldehyde, 87

HCN polymer, 53
high dipolar moment molecules, 343
homochirality, 459
HPLC, 53
hydrogen cyanide, 87

hydrolysis rates, 363
hydrothermal systems, 459

identical to CODH, 403
impact delivery, 15
impacts, 185
interplanetary, 185
interplanetary transfer of life, 527
interstellar molecules, 157, 167
ionization, 3
iron-sulfide minerals, 343

layered double hydroxide, 53
LDH, 53
life on Mars, 527
lipids, 103
liposome, 147
lipozyme, 119

magnetochiral, 249
Mars, 185, 459
Martian environment, 287
martian meteorites, 185
membrane, 147
membrane mimetic chemistry, 119
Methanimine, 481
methanogenic bacteria, 271
meteorites, 527
micellar catalysis, 119
microfossils, 459
micrometeorites, 459
mineral catalysis, 53
minimalist RNA, 511
molecular evolution, 71, 231
montmorillonite, 381
mutual catalysis, 119

*n*-alkanols, 103
*n*-alkanoic acids, 103
*n*-alkyl formates, 103
N-carboxyanhydrides, 241
nucleotide hydrolysis, 363
nucleotides, 87
nucleotide triphosphates, 147

origin of life, 15, 119, 167, 231, 459, 501
origin of optical activity, 199
origin of translation, 511
oxalic acid, 103
oxidation state, 311

paleoclimate, 271
panspermia, 185, 459, 527
parity-violating energy difference, 249
passive diffusion, 147
peptide bon synthesis, 511
peptide elongation, 241
peptidyl transferase, 511
PFOR, 403
phosphite hydrolysis, 363
phosphorus-3-bonds, 363
phosphorous acid diesters, 363
phosphorylation, 87
photochemistry, 249
prebiotic catalysis, 381
prebiotic evolution, 119
prebiotic synthesis, 53, 71, 87, 221, 231
pre-RNA, 363
protoplanetary disks, 157
protocell, 147
protostars, 157
purines, 481
pyrimidines, 481
pyrite, 343
pyruvaldehyde, 231
pyruvate ferredoxin oxidoreductase, 403

radiation, 185
radioactivity, 3
radon, 3
reducing atmosphere, 311
resolution, 501
ribonucleic acid, 87
ribose, 87
RNA, 459
RNA binding to clay, 381
RNA formation, 381
RNA inhibition, 381
RNA oligomers, 381
RNA world, 511
Rosetta, 199

self-addition, 53
self-reproduction, 119
shock recovery experiments, 15
small peptide catalysts, 511
solar UVB, 287
space experiments, 527
spinel, 311
spores, 287
star formation regions, 167
sugar chemistry, 71
sugar dehydration, 231
survival, 185, 287
synchrotron radiation, 249

Titan, 459
transport, 185
trimetaphosphate, 87
triose, 231

uracil, 211

voids, 3
volcanic gases, 311

46P/Wirtanen, 199
